Speaker: Mr. Wong Chun Choi, Tommy

Mr. Tommy Wong is the General Manager of a leading pre-stressing company - Freyssinet HK Ltd. He is responsible for the business and operations of the Company in Hong Kong and Macau. Mr Wong was born in a construction family, his father was a construction worker and his first construction site experience was gained during his summer holiday. After he graduated in 1987 in the Polytechnic, he joined a small construction consultant and worked in the NT Circular Road Phase 2. After that he worked in Main Contractors for another 15 years in projects like Tin Shui Wai Development, NENT Landfill, Airport Express Line, MTR TKO Extension, Westrail, and Deep Bay construction. Then he joined Freyssinet HK Ltd.

Abstract :

Since the invention and adoption of post-tensioning in construction work, we are able to design for longer span structure and at the same time, we need to look at how to build it. In-situ construction will enable to handle most of the cases but if we are aiming at optimizing construction time, precast construction will be another consideration. Lifting frames are very commonly used equipment in precast installation, the design and operation is straight forward but in some cases when there is more site constraint, some more attention on the design and operations in a safe manner will be required.

The Guidelines on Safe Use of Lifting Frames and Launching Girders for Bridge Construction is attached for easy reference.
