INTRODUCTION

The pace and scale of urbanization bring new challenges to many Governments around the world and the city is at the centre of the change. The need for a coordinated and innovative effort by both the public and private sectors to fulfil infrastructure and socio-economic needs in a systematic and sustainable manner while tackling the important subjects such as climate change, resource efficiency, biodiversity and quality of life issues is of paramount importance. The environmental management and engineering profession has a significant role to play that will shape the future of the development. This forum aims to provide a platform for professionals and academics in the environmental management and engineering industry to gain further insights on the latest practices and development of technologies that are required for the development of a World-Class city, and to share local and overseas experiences and stimulate initiatives that could further reinforce Hong Kong’s status as a World City.

The forum comprises the keynote session and three other sessions: 1) Evolving Role of Environmental Professionals in Urban, Public Projects, Strategic Plans and Good Governance; 2) Engineering and Managing Adaptive Sustainable Responses for Managing Hong Kong’s Bio-Capacity: Challenges and Opportunities; and 3) Potential Contribution of Environmental Leaders to Hong Kong’s Economic Diversification and Sustainable Growth. The forum will bring together professional engineers, professionals, experts, academics and industry stakeholders to share their knowledge, experiences and insights on the subjects to be covered by the Annual Environmental Forum.
